## Subject Index to Volume 16

- Alloy 800, carburization-oxidation-sulfidation, 253  
Alumina, morphology of scales on iron-base alloys, 313
- Binary alloys, scale morphologies, 1
- Carbon dioxide atmospheres, oxidation of mild steel, 133  
Carburization of alloy 800, 253  
Char, corrosion by, 29  
Chromium-depleted zones in stainless steel, 371  
Cobalt, oxidation at low temperatures, 355  
Copper-cobalt, mono-phase alloy oxidation, 277  
Copper, corrosion in  $\text{SO}_2$  after preoxidation, 221  
Corrosion of copper in  $\text{SO}_2$ , 221  
Corrosion of superalloys in char, 29
- Diffusion, metal lattice, effect on oxidation, 147
- Early stages of oxidation, ion-implanted nickel, 409
- Fe-C alloy oxidation, 339  
Fe-20Cr, scaling in  $\text{H}_2$ - $\text{H}_2\text{O}$ - $\text{H}_2\text{S}$ , 175  
Fe-Ni-Co alloys, oxidation mechanism, 99
- Global volatilization rate, calculation of, 243  
Growth of scales, parabolic, on binary alloys, 81
- Infrared spectroscopy of corrosion products on steel, 399  
Internal oxidation, mathematical model, 385  
Ion-implanted nickel, oxidation, 409  
Iron-base alloys, morphology of scale growth, 295  
Iron, initial oxidation at  $200^\circ\text{C}$ , 107
- Low sulfur activity, effect on stainless oxidation, 371  
Low-temperature oxidation of cobalt, 355
- Manganese sulfidation, 267  
Mathematical model for internal oxidation, 385  
Mechanism of oxidation, Fe-Ni-Co alloys, 99  
Metal lattice diffusion, effect on oxidation, 147  
Mild steels, oxidation in  $\text{CO}_2$  atmospheres, 133  
Morphology of alumina on iron alloys, 313  
Morphologies of scales, 1  
Morphology of scale growth on iron alloys, 295
- Nickel, ion-implanted, oxidation of, 409

- Parabolic growth of solid solution scales, 81
- Quasi-steady-state growth of two-layered scales, 203
- Raman spectroscopy of corrosion products on steel, 399
- Scales, morphology of, 1
- Sea salt, effect on stainless steel oxidation, 327
- SO<sub>2</sub> corrosion of preoxidized copper, 221
- Solid solution oxides, formation during internal oxidation, 159
- Solid solution scales, growth of, 81
- Spectroscopy, infrared and Raman, corrosion products on steel, 399
- Stainless steels, oxidation by sea salt, 327
- Stainless steels, oxidation of chromium-depleted zones, 371
- Sulfidation of Mn, 267
- Sulfur, corrosion by on iron, 107
- Superalloys, corrosion in char, 29
- Thermodynamics, application to oxidation of mild steel, 133
- Two-layered scales on pure metals, 203
- Vaporization, global rate constant, calculation, 243
- Weathering steel, spectroscopy of corrosion products, 399

# For your library and laboratory . . .

## Laser-Induced Chemical Processes

edited by **Jeffrey I. Steinfeld**  
Massachusetts Institute of Technology

Focusing on the reactions induced by high-intensity infrared irradiation, this volume presents definitive surveys of the theory of multiple infrared photon adsorption; reactions of gas-phase organic molecules following laser excitation; and laser-induced gas-surface reactions. 275 pp., illus., 1981, \$32.50 (\$39.00/£20.48 outside US)

## Interpenetrating Polymer Networks and Related Materials

by **L.H. Sperling**  
Lehigh University

This book highlights a wealth of research on IPNs and related materials. Topics examined include phase separation and mechanical behavior of multicomponent polymer systems, a nomenclature for multipolymer systems, homo-IPNs as model networks, and morphology and glass transition behavior. 275 pp., illus., 1981, \$35.00 (\$42.00/£22.05 outside US)

## Electrochemistry at Semiconductor and Oxidized Metal Electrodes

by **S. Roy Morrison**  
SRI International, Menlo Park, California

Specially designed for electrochemists, surface scientists, and solid-state physicists, *Electrochemistry at Semiconductor and Oxidized Metal Electrodes* is a lucid presentation of the theory and practice of nonmetal electrochemistry. Emphasis is placed throughout on energy level models, in particular the model of Marcus and Gerischer. 414 pp., illus., 1980, \$45.00 (\$54.00/£28.35 outside US)

## Synchrotron Radiation Research

edited by **H. Winick**  
Stanford Synchrotron Radiation Laboratory  
and **S. Doniach**  
Stanford University

*Synchrotron Radiation Research* provides comprehensive treatments of all of the major applications of synchrotron radiation in the X-ray and ultraviolet parts of the spectrum. In addition, information is provided on the properties and sources of the radiation and research facilities. Detailed accounts of many specialized instruments are given as well. Internationally known researchers, active in the field, discuss topics such as EXAFS and its use in biology and material science, the free electron laser, and X-ray topography. 774 pp., illus., 1980, \$65.00 (\$78.00/£40.95 outside US)

## Spin Eigenfunctions Construction and Use

by **Ruben Pauncz**  
Technion-Israel Institute of Technology, Haifa

Spin eigenfunctions play an important role in the construction of the antisymmetric many-electron wavefunction that is crucial to quantum mechanical descriptions of atoms and molecules. This volume provides a comprehensive examination of the various methods for construction of these functions and points out the interrelationship of these techniques. 386 pp., 1979, \$35.00 (\$40.00/£22.05 outside US)

## Hydrophobic Interactions

by **Arieh Ben-Naim**  
The Hebrew University of Jerusalem, Israel

"... this book helps form a more solid basis for our understanding of a very important kind of interaction in liquid media. It is highly recommended to all biochemists, biophysicists, and physical chemists who are involved, or should get involved, in the study of H<sub>2</sub>O."

— **Carel J. van Oss**, *Preparative Biochemistry*  
326 pp., illus., 1980, \$32.50 (\$39.00/£20.48 outside US)

233 Spring Street, New York, N.Y. 10013  
United Kingdom: 88/90 Middlesex Street  
London E1 7EZ, England

# CHANGING YOUR ADDRESS?

In order to receive your journal without interruption, please complete this Change of Address notice and forward to the Publisher, 60 days in advance, if possible.

**Plenum Publishing Corporation**  
233 Spring Street  
New York, New York 10013

## Instructions to Contributors

1. Manuscripts should be sent to:  
Prof. D. L. Douglass  
Materials Department  
Room 6531, Boelter Hall  
University of California at Los Angeles  
Los Angeles, California 90024
2. Submission is a representation that the manuscript has not been published previously and is not currently under consideration for publication elsewhere. A statement transferring copyright from the authors (or their employers, if they hold the copyright) to Plenum Publishing Corporation will be required before the manuscript can be accepted for publication. The Editor will supply the necessary forms for this transfer. Such a written transfer of copyright, which previously was assumed to be implicit in the act of submitting a manuscript, is necessary under the new U.S. Copyright Law in order for the publisher to carry through the dissemination of research results and reviews as widely and effectively as possible.
3. Type double-spaced, and submit the original and two copies (including, where possible, copies of all illustrations and tables).
4. An abstract of 150 words or less is to be provided.
5. A list of 4–5 key words is to be provided directly below the abstract. Key words should express the precise content of the manuscript, as they are used for indexing purposes, both internal and external.
6. Illustrations (photographs, drawings, diagrams, and charts) are to be numbered in one consecutive series of Arabic numerals. The captions for illustrations should be typed on a separate sheet of paper. Photographs should be large, glossy prints, showing high contrast. Drawings should be prepared with india ink. Either the original drawings or good-quality photographic prints are acceptable. Identify figures on the back with author's name and number of the illustration.
7. Tables should be numbered and referred to by number in the text. Each table should be typed on a separate sheet of paper.
8. References should be made by using superscript Arabic numerals, and the full references should be given in a list at the end of the paper. For maximum clarity, abbreviations should be avoided in the references. Whenever a book is cited, the number of the relevant chapter should be given.
9. In general, *Oxidation of Metals* follows the recommendations of the American Institute of Physics in their *Style Manual*, and it is suggested that contributors refer to this publication.
10. **The journal makes no page charges.** Reprints are available to authors, and order forms are sent with proofs.

## OXIDATION OF METALS

Vol. 16, Nos. 5/6

December 1981

### CONTENTS

Oxidation of Fe-C Alloys in the Temperature Range 600-850°C	339
<i>A. U. Malik and D. P. Whittle</i>	
The Oxidation of Cobalt in Air From Room Temperature to 467°C	355
<i>H. G. Tompkins and J. A. Augis</i>	
Observations on the Effect of Low Sulfur Activity on the Oxidation of Chromium-Depleted Zones in a Stainless Steel	371
<i>R. C. Lobb and H. E. Evans</i>	
A Mathematical Model for Internal Oxidation	385
<i>K. M. Vedula, A. W. Funkenbusch, and R. W. Heckel</i>	
An Infrared and Raman Spectroscopy Study of the Corrosion Products on Carbon Steel and Weathering Steel	399
<i>P. Fabis, C. Brown, T. Rockett, and R. Heidersbach</i>	
The Early Stages of Oxidation of Ion-Implanted Nickel at High Temperature	409
<i>Zhou Peide, F. H. Stott, R. P. M. Procter, and W. A. Grant</i>	
Author Index to Volume 16	427
Subject Index to Volume 16	429
